

Position Product Designer

Dear Hiring Manager,

I will briefly state the distinguishing points of my skills here. We can talk about the other details in the interview process if necessary.

I'm a Product Designer with a degree in Computer Science and various coding experience in different platforms. Therefore I understand the development side of the products in-depth, and this helps me a lot while designing and communicating with the developers.

I can build very high-fidelity prototypes with Framer, HTML/CSS/JS or other prototyping tools to test various design ideas effectively. You can check out my portfolio for prototyping examples: emin.space and these case studies I made recently: Booking: bit.ly/2yiCmIm, Opay: bit.ly/2kwnKgm, Citymapper: bit.ly/2z8w8a5

I contribute to the community as I take — by writing articles and making side-projects like developing Sketch plugins or making concept designs. Some of my articles and Sketch plugins were featured on popular newsletters like Sketch, Designer News, Hey Designer, Sidebar.io and Indie iOS Dev Weekly.
