ARTICLES medium.com/@einancunlu

Hello, I am a self-taught Product Designer with a degree in Computer Science and various coding experience. I love working on UI & UX and I always stay hungry for self-improvement.

Understanding the development side of the products makes me a better designer. It also helps a lot while working with the developers.

In my spare time, I like writing and sharing my knowledge on Medium, traveling the world, go for hiking, reading, watching, working on side projects and contributing to the community.

Some of my articles and Sketch plugins were featured on Sketch Newsletter, Designer News, Hey Designer and Indie iOS Dev Weekly.

EXPERIENCE

APR 2015 – PRESENT • REMOTE

Freelance Product Designer — HelloTalk

HelloTalk is a language learning & exchange app with more than 6 million users worldwide. I worked on the redesign of the UI and on the new features.

SEP 2014 – FEB 2015 • PERSONAL PROJECT

Languru — Universal iOS App

I made a dictionary app which is focused on using human translated example sentences for language learning. It supports more than 100 languages.

NOV 2013 – JUL 2014 • ANKARA, TURKEY

iOS & Front-End Developer, UI Designer — Korvus

I was involved in design and development of web and mobile parts of a social advertising project.

FEB 2013 – JUN 2013 • PERSONAL PROJECTS

Finimalist and TOBB ETU — iPhone Apps

SEP 2012 – DEC 2012 • INTERNSHIP • ANKARA, TURKEY

Graphic Designer — Expokent

JAN 2011 – APR 2011 • INTERNSHIP • ESKISEHIR, TURKEY

Android Developer, UI Designer — Ester

EDUCATION

2008 – 2013 • FULL SCHOLARSHIP

Computer Engineering — GPA: 3.3 out of 4.0

TOBB University of Economics and Technology

LANGUAGES

English — Professional Proficiency

TOEFL IBT Score: 80 / 120 – February 2014 (Outdated)

Turkish — Native

German and Spanish — Beginner

HelloTalk UI & UX Redesign

Latest Designs I did at HelloTalk

HelloTalk is a language learning & exchange app with more than 6 million users worldwide. I worked on the redesign of the interface and the designs for the new features.

The collage displays several screenshots of the HelloTalk app's user interface:

- Top Left:** Home screen featuring a large speech bubble icon, the HelloTalk logo, and a "Sign Up With Facebook" button.
- Top Right:** A group chat screen titled "English Practice Group" with messages from users like Anna Melo Pinto, Chan Huang, Michael Johnston, and Markus Himmel.
- Middle Left:** A feed post by Frank Andrews asking what the name of traditional music in the background is, with a response from Jackson Tepper.
- Middle Center:** A profile page for Michael Johnston, showing his location in London, United Kingdom, and his language skills: ENGLISH, CHINESE, FRENCH, SPANISH, TURKISH.
- Middle Right:** A "VIP Membership" promotional screen highlighting benefits such as "No Ads", "Power Search", "Unlimited Translation Tools", and "Learn More Languages". It offers three payment plans: 1 MONTH (\$1.99/month), 1 YEAR (\$1.25/month), and LIFETIME (\$50).
- Bottom Left:** A feed post by Aaliyah Morrison asking how to say something in Turkish, with a response from Zeynep Demir.
- Bottom Center:** A feed post by Michael Johnston asking what a word means, with a response from Burak Solmaz.

Concept Design for Noodl

Adding Major New Features and Polishing the UI & UX

Noodl is a node-based prototyping app. I used Framer to prototype this concept design to show my ideas in action. You can download and watch the videos at this link: <https://cl.ly/jbwD>

The collage illustrates the Framer interface used for prototyping the Noodl app. It includes:

- Flow Container:** Shows the flow controller for the "Photo Detail Screen". It includes settings for "Overlay Action" (Show Previous), "Overlay Color" (#000000 100%), and "Transition Progress".
- Component Inputs:** A purple box showing inputs like "Image", "Date", and "Name".
- Photo State:** A blue box showing states like "Opacity", "Height", and "Toggle".
- Elements Group:** A blue box containing "Photo Detail Screen" components: "Date Label", "Name Label", and "Other Elements".
- Photo Detail Screen:** A screenshot of the mobile application showing a sunset photo, date (18 DEC 16), and caption (By Diana Newman). It includes a "Close Button" and a "Bookmark Button".
- Component Outputs:** A purple box showing outputs like "Width", "Height", and "Target".
- Components Panel:** Shows various components like "Component Inputs", "Component Outputs", "Flow Container", and "Navigation Bar".
- Screens:** A screenshot of the mobile application showing a navigation bar with tabs for "ALL", "AMERICA", "EUROPE", "AFRICA", "ASIA", "AUSTRALIA", and "ANTARTICA".
- Filters - Mobile:** A screenshot of the Framer interface showing CSS media queries for mobile devices.
- Change Style:** A screenshot of the Framer interface showing CSS/SCSS code for styling elements like ".group" and ".rectangle".
- JavaScript:** A screenshot of the Framer interface showing a "Make Uppercase" JavaScript block being used to process "Item ID".
- 9 - Slicing:** A screenshot of the Framer interface showing slicing for a "Day Tab" and "Tomorrow Tab" with "SLICING POSITIONS" (72, 56).

Languru Universal iOS App

Coded with Swift and Used Adaptive Design

<https://cl.ly/jcQS>

It is a language learning & dictionary app. Search any phrase for definitions and rich human translated example sentences from real life to learn how to use them in different contexts.

Search words, phrases, idioms... and find different use cases

Example sentences from life
Search and learn to use languages via real cases

Supports over 100 languages

From	To
Chinese	Chinese
German	German
French	French
Spanish	Spanish
English	English
Afrikaans	Afrikaans
Albanian	Albanian
Arabic	Arabic
Aragonese	Aragonese
Armenian	Armenian
Asturian	Asturian

Night theme option
Better for eyes in the dark
